## OPTICAL FIBER IDENTIFIERS

	<p>The OFI 200B optical identifier is designed to detect optical signals without disrupting traffic. During maintenance, installations, rerouting, or restorations it is often necessary to isolate a specific fiber. By simply clamp onto the OFI 200B onto a fiber, the unit will indicate if there is no signal, a 2 kHz tone, or traffic, and show signal direction.</p>	<p style="text-align: right;">1 - 3 Days: \$69.00/day 4 - 6 Days: \$55.00/day Weekly: \$295.00 Monthly: \$650.00</p>

## VISUAL FAULT LOCATOR/IDENTIFIER (VFL/VFI)

	<p>Visible fault locators/identifiers are simple, easy to use instruments designed to locate faults on fiber optic cables. When a break or sharp bend exists in a fiber, the red light from the visible fault identifier will indicate the trouble spot. Used with either multimode or singlemode fiber, the VFL/VFI has many useful applications such as locating troubles in splice trays, patch panels, cable splice points, and tracing fiber runs.</p>	<p style="text-align: right;">Daily: \$19.00/day Weekly: \$79.00 Monthly: \$150.00</p>
